DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over USPN 6,943,086 to Hongo et al in view of USPN 6,804,269 to Lizotte et al or in view of USPN 6,875,951 to Sakamoto et al. Hongo et al show (Figures 1 and 9) and describe (column 7, line 66 through column 8) a laser system which meet applicant's claimed total reflection/transmission type beam combining means and polarizing type beam combining means and which is capable of a plurality of three or more beam splits. Hongo et al describe fly eye lens beam splitting and also describe (column 8, lines 43-45) a prism. Both Lizotte et al and Sakamoto et al describe the delivery of divided

Art Unit: 1725

beams to the workpiece. The use of the Hongo et al laser annealing apparatus having selective beam shaping through a beam combining means comprising a total reflection/transmission type beam combining means and a polarizing type beam combining means in a working mode which provides split beams to the workpiece as described in both Lizotte et al and Sakamoto et al would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because the simultaneous multiple processing beams provide faster work processing.

Response to Arguments

Applicant's arguments with respect to claims 1-3 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. USPN 4,787,747 to Sommargren et al describe use of antireflection and polarizing coatings for obtaining parallel orthogonally polarized beams.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not

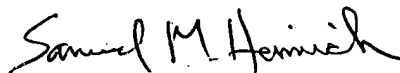

Art Unit: 1725

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
